

TEST REPORT

Mr.MELVIN SAVIO BABU

ERATTACHIRAKKIL HOUSE,VELLAD PO,KANNUR

Age : 20 Years / Sex : Male

Tele. No : 8590610370

Passport No:

Aadhaar No: 621117341673

SRF NO :

Reference :

Sample Collected At :

St.JOSEPH HOSPITAL

VID : **AML-73275**

Registered On :

06-Dec-2021 5:49 pm

Sampled On :

06-Dec-2021 5:50 pm

Reported On :

06-Dec-2021 9:24 pm

SARS-CoV-2 (COVID 19) Detection (Qualitative) by Real Time PCR*

Result :

SARS-CoV2 RTPCR*	NEGATIVE
-------------------------	-----------------

Test : Qualitative RNA detection of SARS-CoV-2 (COVID19)
Specimen Type : Nasopharyngeal/Oropharyngeal Swab
Test principle : Real time reverse transcription PCR (ICMR approved kit)
Test description : Detection of "N" Gene/RdRp Gene/ORF1A Gene

Apollo Medical laboratory ICMR registration: APMELAKK

Interpretation guidelines

A. For result as "POSITIVE":

- 1)Positive result indicates presence of SARS-CoV-2
- 2) False positive is rare globally.
- 3) A repeat test of freshly collected specimen may give different result due to the following-
 - a. Viral load reduces day by day and one may clear virus as early as 4.3 days.
 - b. The new sample may have low viral load due to varied shedding of the virus.
 - c. Inherent variability due to improper sample collection and inadequate storage while due care is taken at Apollo Medical Laboratory.
- 4) 80% of patients with "Positive" result may be asymptomatic.
- 5) A detected result does not distinguish between a viable/replicating organism and a non-viable organism

B. For result as "NEGATIVE":

- 1) "Negative" result indicates absence of SARS-CoV-2 in the given specimen. However, it does not rule out the infection completely and should not be used as the sole basis for making decisions related to treatment and other patient management decisions.
- 2) If a subsequent test is tested positive , it may indicate an infection acquired subsequently or increase in viral load to detectable level after the first test.

Suggested clinical correlation
